WORK EXPERIENCE

Full-Stack Developer

Real Estate Platform | Personal Project | (Django, React, PostgreSQL, JWT Authentication, Tailwind CSS)

- Designed and developed a real estate marketplace allowing users to buy, rent, and reserve properties.
- Implemented secure authentication and role-based access control for users, landlords, and agents.
- Developed a dynamic search and filter system to improve user experience.
- Integrated an automated messaging system for direct communication between property owners and clients.
- Optimized database queries, ensuring fast property listings and searches.

Full-Stack Developer

E-Commerce Website | Personal Project | (Django, React, REST API, Flutterwave, PostgreSQL, Tailwind CSS)

- Built a fully functional online store with product listing, shopping cart, and checkout features.
- Implemented secure payment integration using Flutterwave, ensuring seamless transactions.
- Developed a RESTful API for product management, order processing, and user authentication.
- Designed a responsive and modern UI using React and Tailwind CSS.
- Improved database performance, reducing product retrieval time by 40%.

Backend Developer

Blogging Platform API | Personal Project | (Django REST Framework, PostgreSQL, JWT Authentication)

- Developed a scalable and secure API for a blogging platform.
- Implemented CRUD functionalities for blog posts, categories, and user comments.
- Used JWT authentication to secure API endpoints.
- Designed pagination and filtering to improve API efficiency.
- Wrote unit tests to ensure API reliability and performance.
